

Wobb Assignment

Assignment Repository

Repository:

<https://github.com/Wobb-ai/vibe-coder-assignment>

Overview

Build on a starter influencer search application built with **React**, **TypeScript**, **Vite**, and **Tailwind CSS**.

The project is intentionally functional but not production-ready. Your goal is to improve the application by fixing issues, redesigning the UI, and enhancing the overall code quality.

Getting Started

Clone or download the repository:

<https://github.com/Wobb-ai/vibe-coder-assignment>

Install dependencies:

```
npm install
```

Start the development server:

```
npm run dev
```

Open your browser and visit:

<http://localhost:5173>

What's Included

The starter project already includes:

- Search / Dashboard
 - Filter influencers by platform (Instagram, YouTube, TikTok)
 - Search by username or full name
 - Profile Details
 - Click a profile to view detailed information loaded from JSON files
 - Routing
 - / — Dashboard
 - /profile/:username — Profile Details
 - Sample data
 - src/assets/data/search/
 - src/assets/data/profiles/
-

Submission Process

1. Clone or download the assignment repository.
 2. Create a **new GitHub repository** under your own account.
 - **Do not fork** the assignment repository.
 3. Complete the assignment.
 4. Push your code to your repository.
 5. Share your **public GitHub repository URL** with us before the deadline.
-

Deadline (Strict)

Submission Deadline

2 July 2026 — 2:00 PM IST (UTC +5:30)

Please ensure your final code is pushed before the deadline.

Submissions received after the deadline may not be considered.

AI Usage

You are free to use any AI tools, including (but not limited to):

- Cursor
- ChatGPT
- Claude
- GitHub Copilot
- Gemini
- Any other AI coding assistant

We are evaluating your **final solution, engineering decisions, code quality, and your understanding of the implementation.**

During the interview, you may be asked to explain your approach and the changes you made.

Your Tasks

1. Find and Fix Issues

The project intentionally contains various bugs and code quality issues.

Identify and resolve them while ensuring the application works correctly.

2. Redesign the UI/UX

Replace the existing interface with a modern and polished design.

Focus on:

- Better user experience
 - Responsive layout
 - Good visual hierarchy
 - Accessibility
 - Consistent styling
-

3. Replace React Context with Zustand

The starter project uses **React Context**.

Replace it with **Zustand** for state management.

4. Implement "Select Profile & Add to List"

The **Add to List** button is currently incomplete.

Implement the complete feature.

Requirements:

- Add profiles to a selected list
 - Prevent duplicate entries
 - Display the selected profiles
 - Allow removing profiles
 - Keep the list persistent after page refresh
-

5. Improve Code Quality

Refactor the project where appropriate.

Examples include:

- Better folder structure
 - Cleaner components
 - Reusable code
 - Proper TypeScript types
 - React best practices
-

6. Optimize Performance

Improve performance wherever appropriate.

Examples:

- Avoid unnecessary re-renders
 - Optimize component rendering
 - Improve data loading
 - Apply sensible React optimizations
-

7. Use Any Libraries

You are not restricted to the current stack.

Feel free to use any libraries that improve your solution, including:

- UI libraries
- Animation libraries
- Utility libraries
- Testing libraries
- Form libraries
- Data fetching libraries

Choose tools thoughtfully.

Submission Checklist

Before submitting, please ensure:

- ☒ `npm run build` completes successfully
 - ☒ The application runs without errors
 - ☒ Your repository is public (or we have access)
 - ☒ You include a README describing:
 - What you changed
 - Libraries you added
 - Assumptions made
 - Trade-offs
 - Any remaining improvements
 - ☒ Your Git history contains meaningful commits
 - ☒ You submit your GitHub repository URL before the deadline
-

Bonus (Optional)

Additional credit may be given if you:

- Deploy the application
- Improve accessibility
- Add animations or micro-interactions
- Write tests
- Improve overall developer experience

Supported deployment platforms include:

- Vercel
- Netlify

- GitHub Pages
- Any equivalent platform

If deployed, include the live URL in your README.

Useful Commands

Command	Description
<code>npm run dev</code>	Start development server
<code>npm run build</code>	Create production build
<code>npm run lint</code>	Run ESLint

Evaluation Criteria

Your submission will be evaluated based on:

- React fundamentals
 - TypeScript usage
 - Code quality
 - Problem-solving ability
 - UI/UX improvements
 - State management
 - Performance optimizations
 - Overall engineering judgment
 - Git commit history
-

Questions?

If you have any questions regarding the assignment, please reply to the email or contact lohit@wobb.ai.

Good luck! We look forward to reviewing your submission. 🚀
